

# JQUERY Mobile prototype for WebCenter Content

---

Updated: 26 June 2013 - Patrick Monaco - Oracle

V1.1 - New component Thesaurus.zip to be installed

This prototype illustrates the service oriented architecture of Oracle webCenter Content.

It's a JQuery Mobile application written entirely in Java Script. This application uses the WebCenter Content Services

by calling some search API via Http in Json format.

Thanks to bezzotech (Bex Huff) and it's very useful Ajax Plugin. <http://bexhuff.com/2010/06/oracle-ucm-jquery-plugin-for-ajax>

This prototype is suited for demoing webcenter Content for search purpose only.

(Knowledge managment, Vertical applications.)

In the demo, we select an imaginary use case based on Contract management.

Thesaurus is intensively used in this proto (cf French Doc Thesaurus and WCC which is in draft format). So the proto assumes that some views be created before with Both oracle DB and WCC. (cf doc)

## IMPLEMENTATION

=====

1. copy all the files and folders in a folder accessible by http (ie: htdocs/demo)

depending if Apache is used or not, the procedure will vary.

2. Adapt the hostname in the contract.html file

(search for the following string : `var hostname = 'wcc-base';`)

Adapt the Path : (search `$.ucm.cgiPath` )

In a browser, call: `http://<HTTP_SERVER>/<FOLDER>/contract.html`

### 3. Optional: Install a thesaurus

Two versions of Eurovoc thesaurus are provided (FR and EN)

Install the specific component Thesaurus.zip by using the ComponentWizzard tool (cf doc)

You can login, but the navigation doesn't go back nicely, so you have to go back manually on the contract.html page.

This is a JQuery Mobile prototype for Oracle WebCenter Content

This application allows to enter search criterias and browse on resultsets. If some meta have been selected as filter, they are provided on a left panel menu. Some requests can be made against a thesaurus with the Taxonomy option.
